AI 2010 with a class bot: how the course runs for one semester on Grok Bot Team Bots

AI 2010 is Iowa State's introductory applied AI course for non-majors, the course that led to the university-wide Applied AI Minor. About 150 students in spring 2027, three lectures a week plus a weekly lab, no programming prerequisite. This outline shows where the three Team Bots appear, which assignments allow AI and at what level, and what is measured each week. Topics follow the existing syllabus; only the bot layer is new.

Students 150, mixed majors; 2 instructors and 4 TAs **Plan** Grok Bot on Teams, one course team

Data synthetic systems only; no LMS connector, no student email, no submissions in the bot **Term** 14 teaching weeks, late January to early May

The three bots the instructor publishes

BOT	ROLE	RULES, IN PLAIN WORDS
Tutor	Every student, all term	Hints and questions first; a worked example of a different problem; the final answer only after three attempts, then explained. Never a submission-ready artifact.
Lab partner	Weekly lab, in the room	Works only on the sandbox: a sample CRM, a mailbox of synthetic tickets, a demo storefront. Explains every action before running it; stops for approval on anything that writes.
Monday routine	One shared routine, weekly	Compiles the week's reading questions and a short news digest for the discipline themes that week. Read-only; no connectors beyond the web.

AI level per assignment

Each assignment carries one of five levels from the AI Assessment Scale (Perkins, Roe and Furze). The level is not a sentence in the syllabus; it is which bot is open and how it is configured.

LEVEL	WHERE IT APPEARS	SECURED BY
1 · No AI	Two in-class quizzes, final exam	In person, supervised, bots unpublished for the session
2 · Planning	Reflection essays (weeks 3, 9)	Short in-class write from the plan
3 · Collaboration	Four lab reports, discipline case study	Transcript submitted with the work; sampled ten-minute conversations
4 · Full AI	Midterm project	Covered by the level-1 assessments
5 · Exploration	Capstone: build your own bot	Live demo is the viva

Fourteen weeks

WK	TOPIC	BOT USE AND ASSESSMENT
1	What AI is and is not; course rules	Join the team; tutor warm-up; AI-use statement signed
2	Prompting and evaluating outputs	Lab 1: make the tutor wrong, then prove it
3	How language models work, in plain terms	Reflection 1 (level 2)
4	Data: where it comes from, what it costs	Lab 2 on the sandbox CRM (level 3)
5	Agents: tools, actions, approval	Lab partner introduced; quiz 1 (level 1)
6	Supervising an agent: read, catch, fix	Lab 3: "catch the bot" with planted faults
7	AI in business and agriculture	Midterm project brief (level 4)
8	AI in health, education and public services	Midterm project due; mid-term usage note to SpaceXSI
9	Bias, error and accountability	Reflection 2 (level 2)
10	Privacy, security and data terms	Lab 4: what the bot may not touch; quiz 2 (level 1)
11	Designing a bot for a real task	Capstone brief; students start their own bot (level 5)
12	Build week	Instructor's tutor acts as reviewer
13	Demos	Live demos; sampled conversations on lab reports
14	What changes next; review	Final exam (level 1); bots unpublished

What is measured, and for whom

MEASURE	HOW	USEFUL TO
Usage per seat per week	Tracked from week 2; plan of record is two tutor sessions per student per week plus the shared routine	SpaceXSI: where a Teams seat runs out in a real section
Whether Teams-tier controls are enough	Log of every moment the instructor wanted an Enterprise control (audit log, enforced rule, action recording) and why	SpaceXSI: which control a department would buy next
Learning	Quiz and exam scores against the Fall 2026 section taught without the bots; capstone rubric	ISU and the public write-up
Integrity	Share of sampled conversations where the student could explain the transcript	Both

What ISU provides, what SpaceXSI provides

ISU: two instructors and four TAs, one named course-team admin, the course material and the three class bots, a comparison section taught without the bots, and the public write-up with a factual review by SpaceXSI before release. **SpaceXSI:** education credit for 156 seats for the semester, in whatever form is simplest, a named contact, and a 30-minute onboarding for the instructors. Nothing on this page requires a feature SpaceXSI does not ship today.
